FALCUTÉ DES SCIENCES ET TECHNOLOGIES (FST)

TROISIÈME ANNÉE

Rapport du travail de Laboratoire No 2

Étudiante **: Doris YOUYOUTE**
Professeur**: Ismaël SAINT AMOUR**

Le 30 Octobre 2026

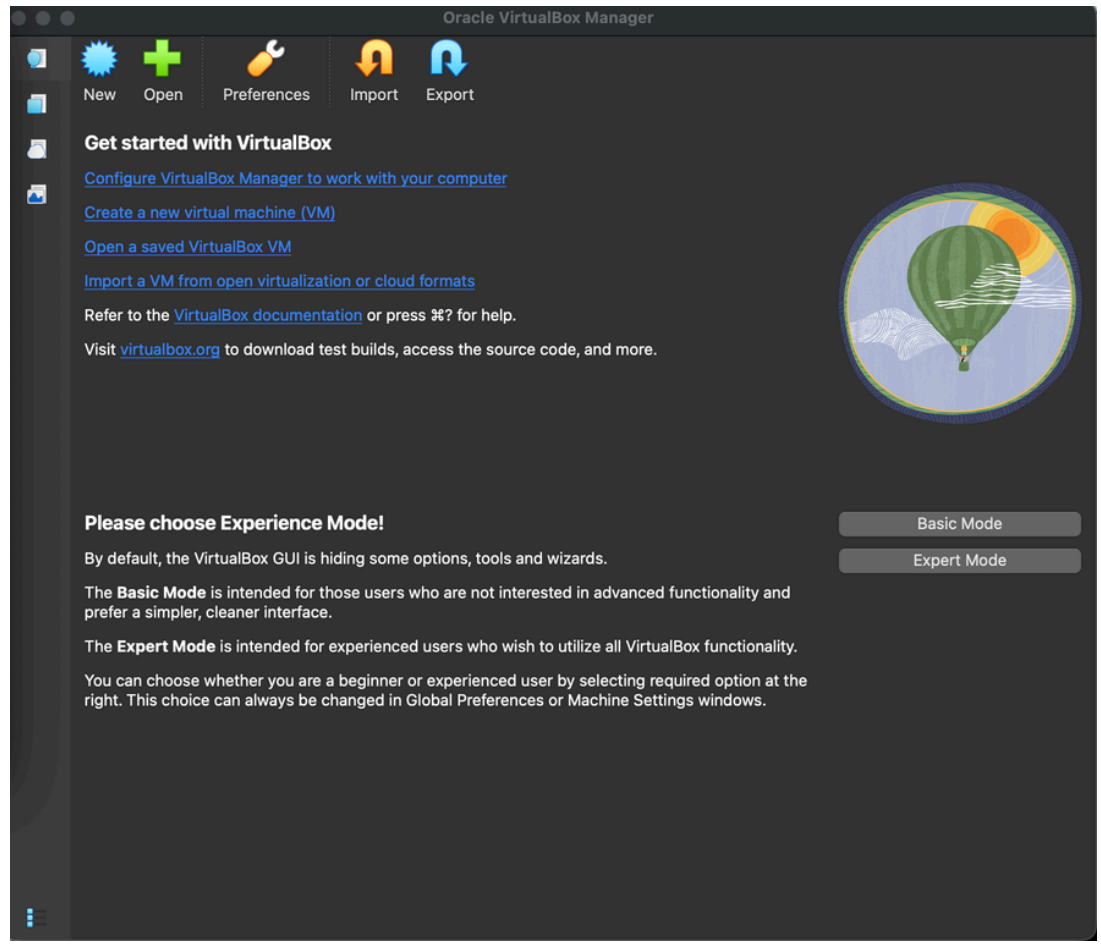

Pour ce TD, j'ai préparé l'environnement de travail en installant VirtualBox et en téléchargeant l'image ISO d'Ubuntu. Puis j'ai créé une machine virtuelle nommée Ubuntu-TP en configurant le type de système, la mémoire RAM et le disque dur virtuel.

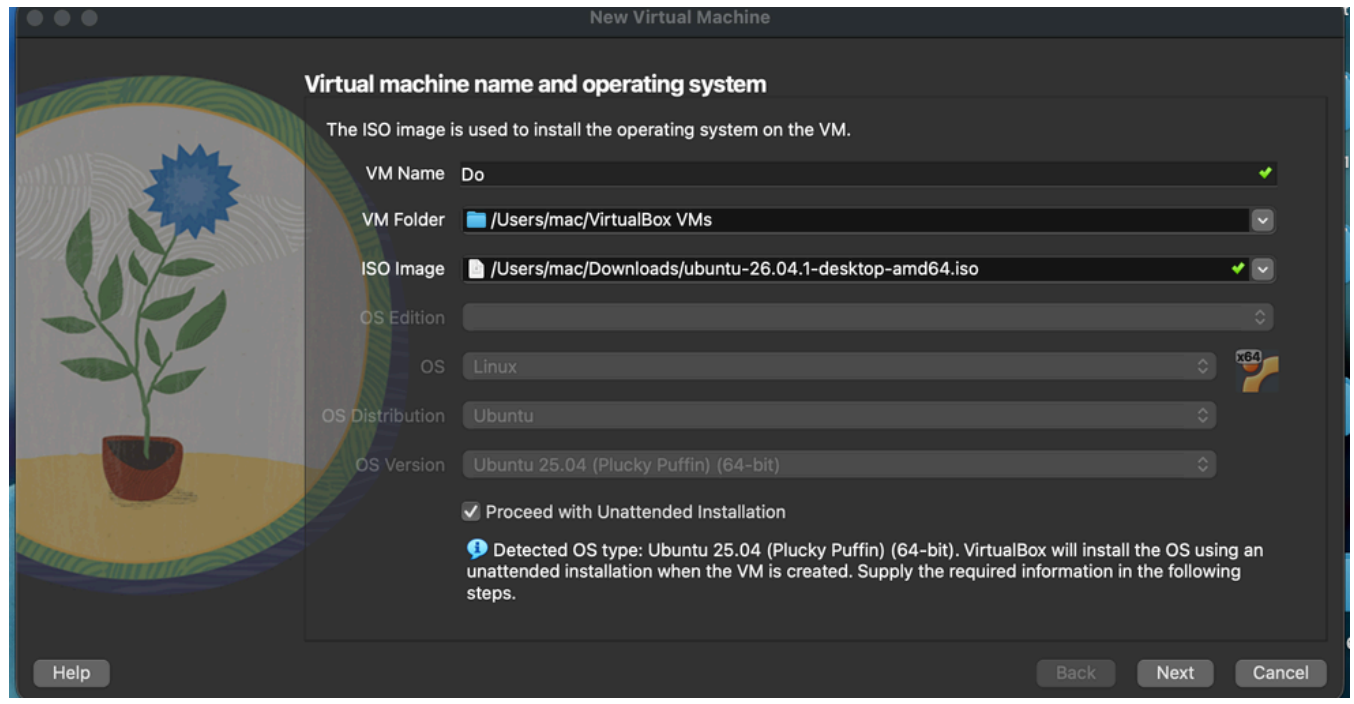

Ensuite j'ai démarré la machine virtuelle et procédé à l'installation d'Ubuntu en choisissant la langue, le fuseau horaire, la disposition du clavier, ainsi qu'un nom d'utilisateur et un mot de passe.

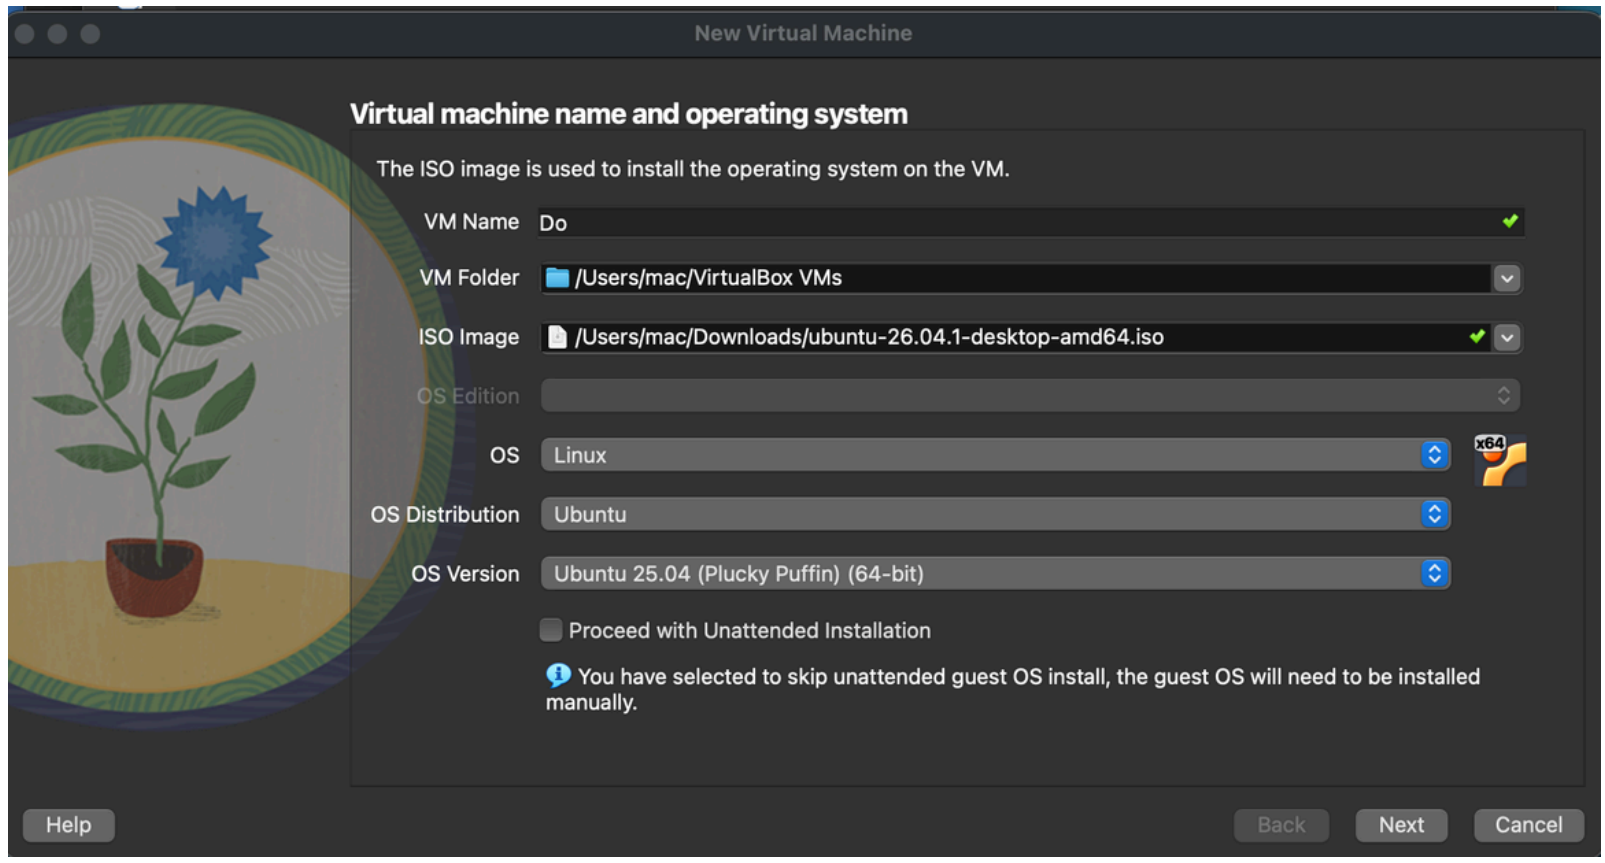

J'ai redémarré la machine virtuelle après l'installation, puis effectué les premières mises à jour du système avec les commandes sudo apt update et sudo apt upgrade -y.

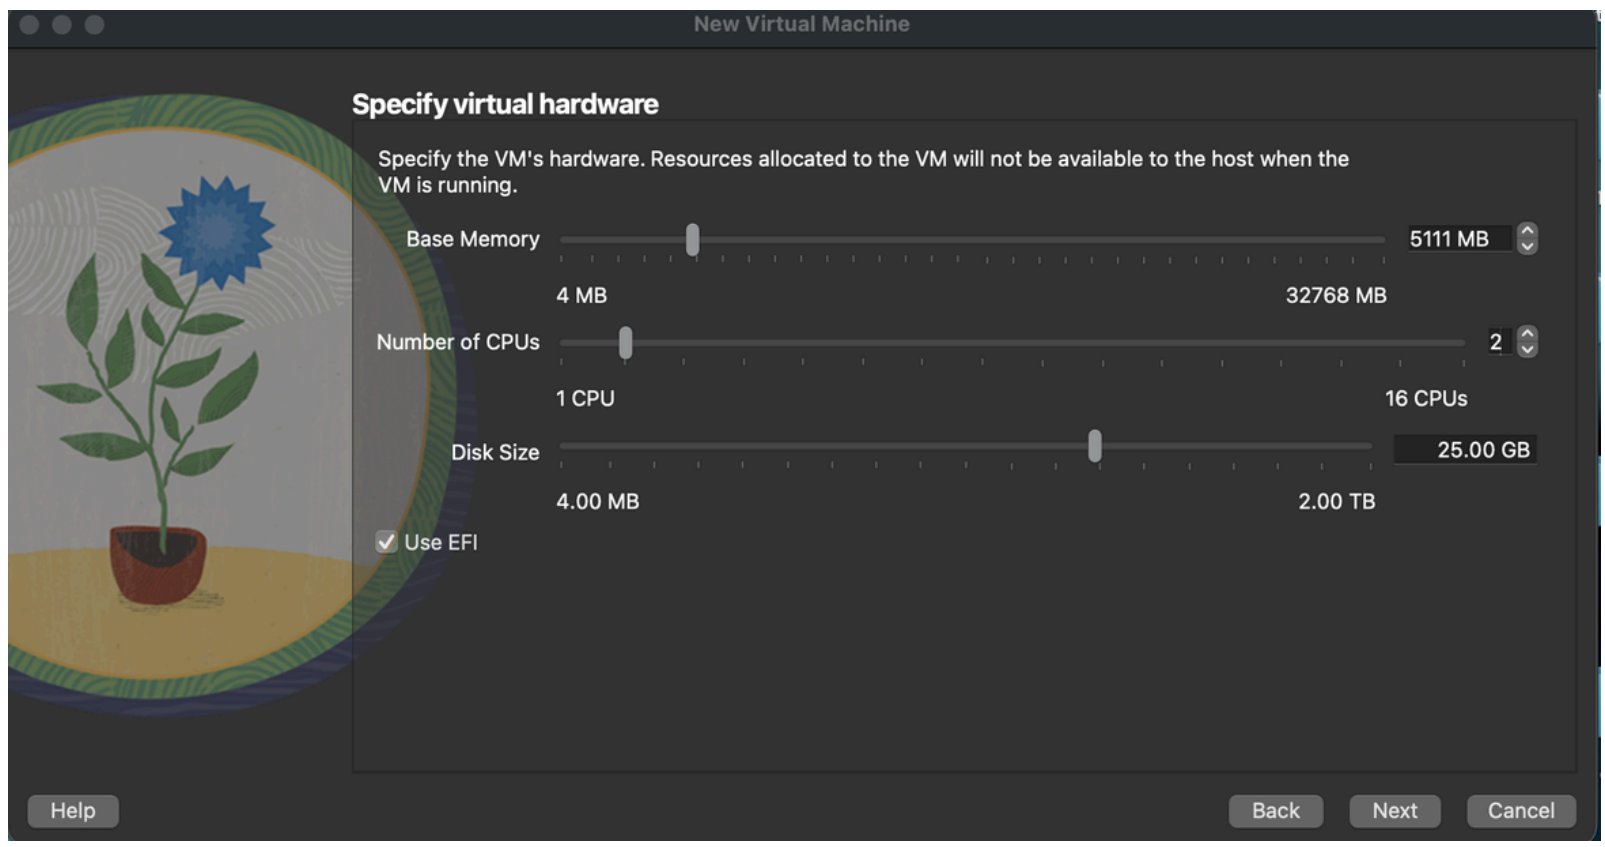

J'ai installé les outils essentiels à l'aide de la commande sudo apt install net-tools curl wget git build-essential -y.

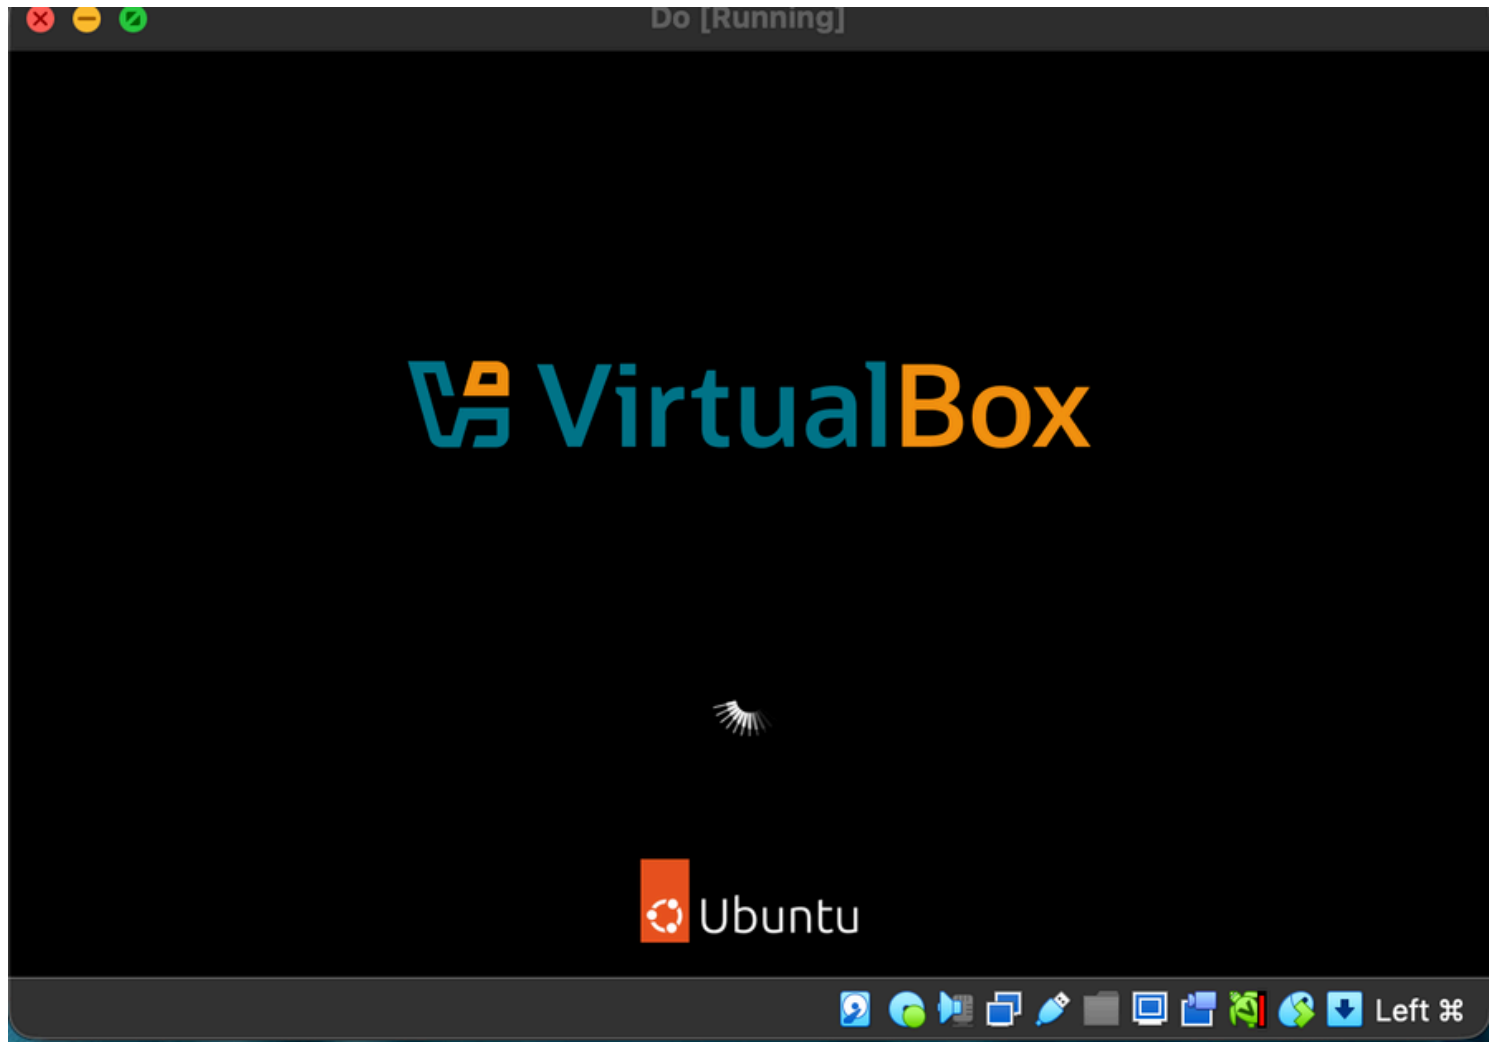

Création de la machine virtuelle

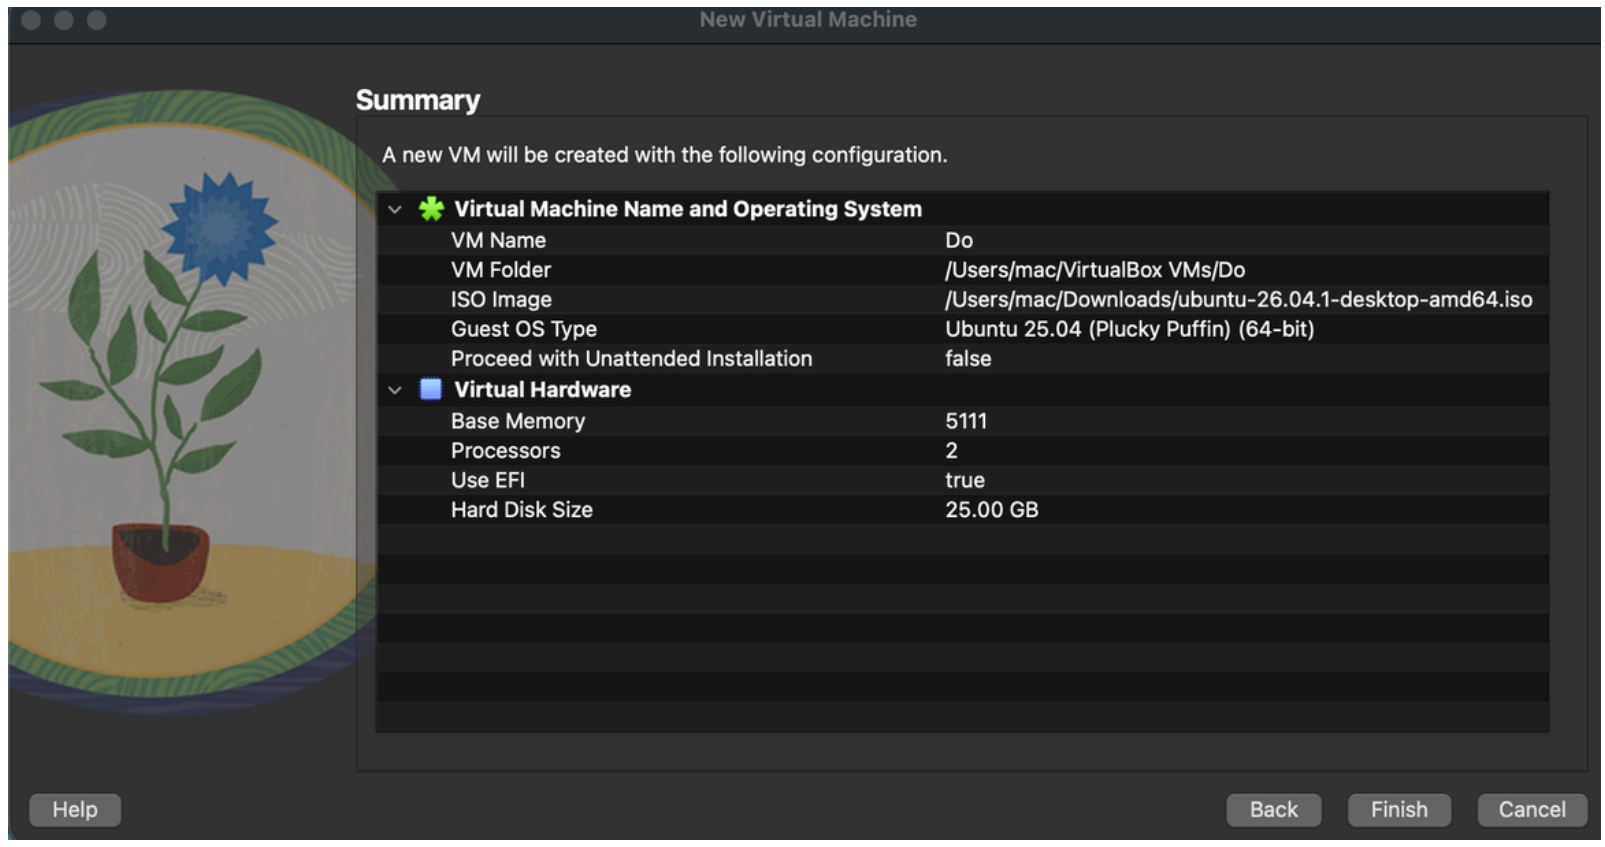

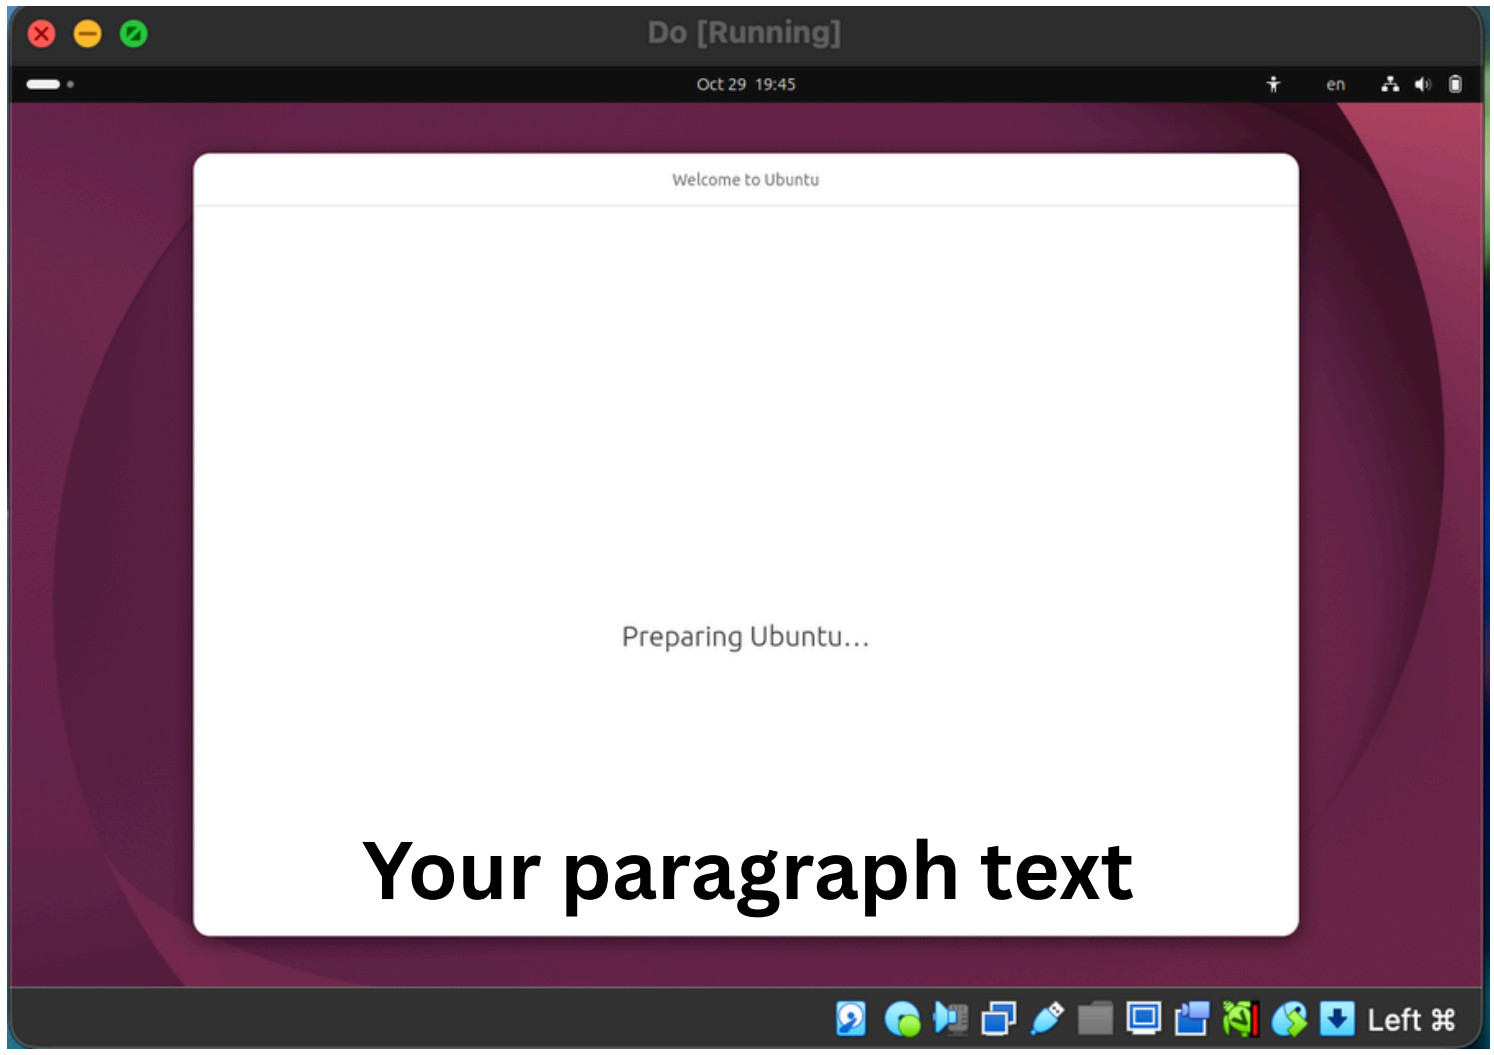

New Virtual Machine
Virtual machine name and operating system
The ISO image is used to install the operating system on the VM.
VM Name

Type of installation
How would you like to install Ubuntu?
Interactive installation
For users who want to be guided step by step through the installation.
Automated with autoinstall file
For advanced users who have an autoinstall.yaml for consistent and repeatable system setups.
Automated with Landscape
For users in organizations that provide an autoinstall file via Landscape.

Exécution des commandes

Conclusion

Ce TD m’a permis d’acquérir des connaissances essentielles en virtualisation, en utilisation de Linux et en gestion de fichiers.

J'ai rencontré certaines difficultés par le fait que j'utilise un Mac book. Après avoir créer la machine virtuelle, la barre supérieure ne s'est pas affiché automatiquement, j'ai donc exécuter une autre commande et ça a fonctionné correctement..
